31.3. In relation to a dividend adjustment to be applied to the Client's account, the Client must hold an open trade at the close of the trading session on the Business Day before the ex-dividend date.

Appendix 1: Functionalities of the Investment Account

1. Initial Minimum Deposit: As soon as the Client meets the Minimum Deposit level, the system automatically starts following the Investment Strategy. i.e. new order or orders shall be executed if the Investment Strategy has open positions at current market prices. This is resume case/action.
2. Redeposit/Withdrawal: When a client submits a redeposit/withdrawal request, where the Investment Account has open positions, the system pauses the Investment Account, executes the redeposit/withdrawal request and then resumes trading, at current market prices.
3. All requests in relation to opening or closing orders on the investment account (i.e. pausing, closing, or enabling safety mode on the account) shall be processed and executed during the trading hours of all the trading instruments in the investment account. Any request to change the protection level shall be processed immediately but shall be executed during the trading hours of all the traded instruments in the investment account."
4. Safety mode: When a client activates "Safety mode" the system initially pauses the Investment Account and then resumes the Investment Account with a new coefficient in order to decrease exposure to risk.
5. During the time of Payout interval, the Investment Account is paused, the system calculates and withdraws the Profit Share for the Manager, if any, and then resumes trading on the Investment Account.

When a client opens an Investment Account, the system automatically sets the protection level at 50%. Before or after the initial minimum deposit, the Client has the ability to:

- a) Adjust (increase/decrease) the Protection level according to his preference.
- b) Choose to only receive an email notification when the specified Protection level is reached, without pausing the account.

When the initial minimum deposit is made, the system takes the current Protection level percentage and calculates the actual value of the Protection level based on the initial minimum deposit. In a case of redeposit or withdrawal protection level is adjusted according the protection level % based on the updated equity after the redeposit or withdrawal.

6. When the Protection level is reached, the system, based on the Client's preference shall pause the Investment Account and send an email notification to the Client, or shall only send an email notification without pausing the Investment Account. Based on the current market conditions, the client's equity can drop below the Protection level. In case the investment account is paused, the system re-calculates the new protection level based on the actual value and the percentage of the Protection level remains the same. The new protection level will be in place as soon as the investor resume the investment account.
7. The Investment Account shall have the same terms and conditions as the Strategy Manager Account that is followed by the Investor Account. The Strategy Manager can be registered under another brand and/or by another company and in case of any complaint the Client shall follow standard Complaints Management Policy.
8. Investment Strategy Termination:

When the Manager withdraws all the funds from his/her Manager's Account, all Investment Accounts following the Manager shall be closed as well.

When a Manager is inactive for 90 calendar days all Investment Accounts following the Manager shall be closed.

Investment account is closed automatically if it is paused for 90 days with 5 calendar days prior email notification before closing.

9. The system can automatically pause an Investment Account
In the case that it cannot follow the Investment Strategy due to:
 - a. The calculated volume to be executed on the Investment Account cannot be fulfilled given that it does not meet the minimum volume requirements. The minimum volume requirement for the execution of trades is 0.0001 lots. Equity of investment account is 100 times less than the manager account;
 - b. Extreme volatility or other technical issue;
 - c. The Free Margin available in the Investment Account is not sufficient to open a new position.
10. The Free Margin available in the Investment Account is not sufficient to open a new position. In case the equity of the investment account is 100 time less than the manager account then investor will receive and email that will indicate how much additional funds the investor should follow in order to be able to follow that manager account.
11. The following Formula is used for calculating Volume of Investment Account:

$$V_i = V_m * R * K$$

V_i = Volume of Investment Account

V_m = Volume of Strategy Account

R = Relationship between the Investment Account's and the Investment Strategy's equities

K = Coefficient of following between the Investment Account and the Investment Strategy. It can be 1 or 0.5.

When following an Investment Strategy, the coefficient might be slightly less in order to protect the Investment Account of the Client.
